

## SKILLS AND TECH

---

- **Programming / Scripting:** Python, C++, Javascript, Shell scripting.
- **Systems / Tools:** Linux, Git, SSH, Tailscale, PostgreSQL, Raspberry Pi.
- **Concepts:** System design, Embedded systems, Cloud computing, Software Engineering Fundamentals, Cybersecurity, Data Engineering.

## EXPERIENCE

---

|                                                                                                       |                                            |                            |
|-------------------------------------------------------------------------------------------------------|--------------------------------------------|----------------------------|
| <b>CMX Cinemas</b>                                                                                    | <b>Team Member</b>                         | <b>Jun 2022 — Sep 2022</b> |
| ◦ Team member and Customer Service role supporting theater operations.                                |                                            |                            |
| <b>Plato's Closet</b>                                                                                 | <b>Sales Associate / Buyer / Keyholder</b> | <b>Sep 2022 — Aug 2024</b> |
| ◦ Assisted customers, managed inventory, and completed managerial duties supporting store operations. |                                            |                            |
| <b>Chartwells Campus Dining</b>                                                                       | <b>Team Member</b>                         | <b>Aug 2023 — Present</b>  |
| ◦ Customer Service and food preparation roles while balancing academics and other responsibilities.   |                                            |                            |
| <b>FGCU Housing</b>                                                                                   | <b>Resident Assistant</b>                  | <b>Aug 2024 — Present</b>  |
| ◦ Leadership role fostering a welcoming and safe community in my residence halls.                     |                                            |                            |

## PROJECTS

---

- **FGCU EagleCyberNest Cybersecurity Research Lab:** Participated in a Machine Learning-Based Digital Twin Framework for Post Disaster Assessment research. Co-proposing a new project: Machine Learning-Based Ransomware Detection and Mitigation for Medical IoT Communication Networks .
- **Software Engineering Fundamentals - Digital Twin Platform:** Used PostgreSQL to import OpenStreetMap data, FastAPI to display road lines in a CesiumJS web viewer. Coordinated meetings and roles among team.
- **Personal Music Library Automation Project:** Developing Python scripts to manage FLAC music library and transfer MP3 files to Raspberry Pi 5 for Plex Server. Utilizing SSH, Tailscale, and Git.
- **Personal JSONResume:** Practicing JSON data management and CLI usage. Generating PDF and web views.
- **Personal Systems:** Building a high-performance personal desktop dual booting Windows and Linux. Configuring a Raspberry Pi 5 as a home server for small applications.
- **Embedded Systems Autonomous Robot Vehicle:** Wrote C++ methods for robot navigation functions. Analyzed logical failures post-testing to understand flaws.

## EDUCATION

---

|                                           |                           |
|-------------------------------------------|---------------------------|
| <b>Florida Gulf Coast University</b>      | <b>Aug 2023 — Present</b> |
| Bachelor - Software Engineering, GPA: 3.0 |                           |

## INTERESTS

---

- **Systems and backend development**
- **Building and optimizing computers and systems**
- **Embedded systems & IoT**
- **Exploring system design, software architecture, and technical reasoning**
- **Developing personal tools & projects**
